Detroit Vapor Oil Stove

Copyright 1919

The Detroit Vapor Stove Co., Detroit, Mich., U. S. A.

Five STAR POINTS of the

Detroit Vapor Oil Stove

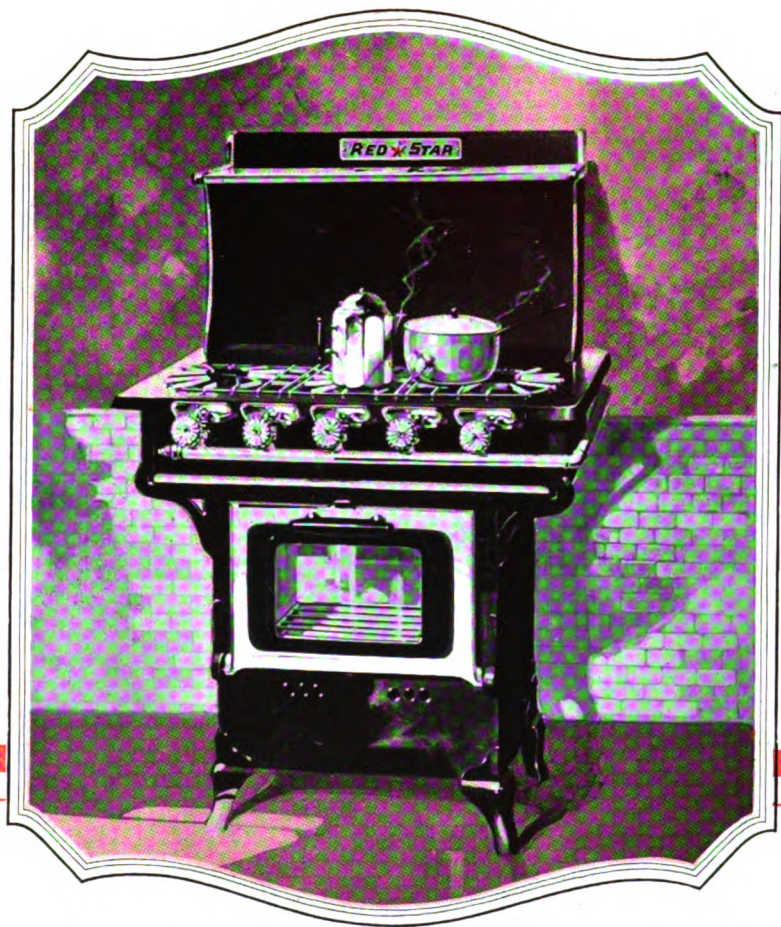

That Every Dealer Should Know

- 1 Durable 8½ pound burner without wicks or wick substitutes. Lights instantly. More economical than coal, wood or gas. Heat directly under cooking utensil.
- 2 Positive valve control regulates heat like city gas. A quick, hot fire or a slow, steady fire by simply turning valve.
- 3 Double flue oven bakes perfectly as fast as a gas range. Linings are rust resisting. Glass door. Handle always cool.
- 4 Convenient, full length high shelf. Fuel supply back of stove. Double tank makes refilling easy.
- 5 Black enamel finish requires no blacking. Easily cleaned with a dry cloth. All nickel parts highly polished. Gas stove appearance.

Every salesman in your store should become familiar with these features. They should form the basis of a solicitation that will usually close a sale.

Detroit Vapor Oil Stove

An Oil Stove Having all the Beauty,
Durability and Cooking Efficiency
of a Fine Gas Range

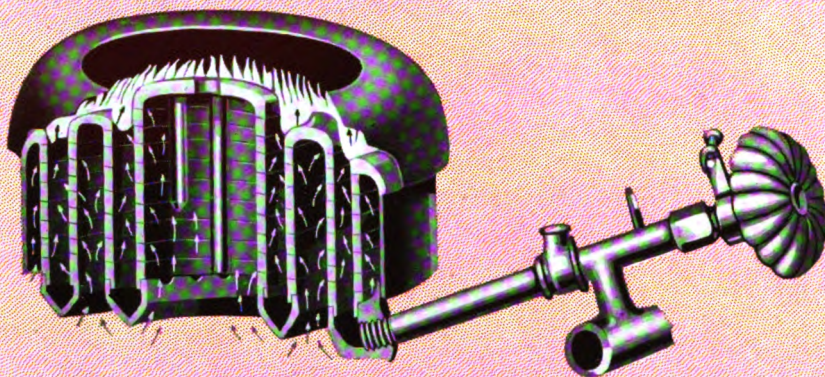

THE above expresses exactly what you sell when you offer your trade the "Red Star" Detroit Vapor Oil Stove.

It is a quality product—because it is made by the best workmen and from the finest materials we can procure, but primarily because it is the policy of this Company to make only quality goods.

The Red Star will serve your customers faithfully by providing a cooking and baking service equal to a gas range. It will be a source of prestige and profit for your store.

The Wonderful Red Star Burner

THE illustration is a cross-sectional view, giving a good idea of how the burner works. Our burner is the original vapor burner in which the fuel flows directly into the burner through an iron pipe, as you will see in the illustration. When the fuel flows into the burner it is immediately mixed with the proper amount of air, as shown by the little white arrows. As the gas and air mix right in the burner, and come to the top of the burner, it turns into a very hot flame. The fuel in our stove is piped directly into each burner through heavy iron pipes, therefore there is no possible chance of fuel leaking anywhere in the stove. The burners themselves are made of solid grey annealed iron and simply rest in place, and should the burners get dirty by spilling anything into them, they can readily be lifted off and cleaned.

The Heat Condenser

Is a shallow cone-shaped casting that rests on the burner—see illustration. You can readily see how it holds the heat and forces it to strike the cooking utensil squarely, allowing none to escape without doing full service. This method of intensifying the heat gives a much hotter and steadier fire with a great saving of fuel. It also tends to prevent anything boiling over into the burner.
